Beacon pilot evaluation

Date: 2026-10-02
Author: Sam Wilson, Support Operations
Project: Beacon
Status: pilot results final

Forty support agents participated in a task-based pilot with 186 evaluation tasks drawn from historical, de-identified support scenarios. The evaluated outcome was time to find an approved knowledge article, not end-to-end ticket resolution. The baseline and prototype used the same task definitions.

Median time to find an approved answer decreased from 4.2 minutes to 3.1 minutes, a reduction of 1.1 minutes, or approximately 26.2%. The observed pilot improvement was below the approximately 35% design target. We do not have evidence of production-wide time savings, revenue or customer-satisfaction changes.

Alex Chen supplied the prototype, evaluation harness and analysis worksheet. Support Operations supplied tasks and evaluated whether answers were approved. Morgan Patel coordinated the production integration. The pilot result reflects the team's combined work, rather than Alex's contribution alone.

Recommended follow-up: evaluate article freshness and zero-result queries before expanding the pilot. Expansion has not yet been completed.
